

## 1. + 2.) getting\_started + save\_classes

```
%% getting_started.m
%% Teilaufgabe 1
roadColors = makesymbolspec('Line',...
    {'CLASS', 1, 'Color', 'r'}, ...
    {'CLASS', 2, 'Color', 'g'}, ...
    {'CLASS', 3, 'Color', 'm'},...
    {'CLASS', 4, 'Color', 'b'}, ...
    {'CLASS', 5, 'Color', 'k'}, ...
    {'CLASS', 6, 'Color', 'y'},...
    {'CLASS', 7, 'Color', 'c'});
shapeRoads = shaperead('boston_roads.shp');
figure
mapshow(roads, 'SymbolSpec', roadColors);

%% Teilaufgabe 2
% read is actually not needed here ...
[tifRoads, R] = geotiffread('boston.tif');
% figure
% mapshow(tifRoads, R);

info = geotiffinfo('boston.tif');
mstruct = geotiff2mstruct(info);
[lat, lon] = projinv(mstruct, [shapeRoads.X], [shapeRoads.Y]);

figure
geoshow(lat, lon);
```

---

```
%% save_classes.m
type('boston_roads.txt')
% CLASS 1 Limited access highway
% CLASS 2 Multi-lane highway, not limited access
% CLASS 3 Other numbered route
% CLASS 4 Major road - collector
% CLASS 5 Minor street or road
% CLASS 6 Minor street or road
% CLASS 7 Highway ramp

roads = shaperead('boston_roads.shp');
histcounts([roads.CLASS], 'BinLimits', [1 7], 'BinMethod', 'integer')
% 76    111    138    953    1177    334    6

for k = 1:7
    filename = sprintf('%s%d', 'boston_roads_class_', k);
    class = shaperead('boston_roads.shp',...
        'Selector', {@(v1) (v1 == k), 'CLASS'});
    save(filename, 'class');
    sprintf('Saved class %d to %s', k, filename)
end
```

## 3. init\_shapefile + main

```
% init_shapefile.m
function [] = init_shapefile()
    info = geotiffinfo('boston.tif');
    mstruct = geotiff2mstruct(info);
```

```

highway = shaperead('boston_roads.shp',...
    'Selector',{@(v1) (v1 <= 3), 'CLASS'});
[lat, lon] = projinv(mstruct, [highway.X], [highway.Y]);
save('highway', 'lat', 'lon');
disp('Saved class highway.');
```

```

local = shaperead('boston_roads.shp',...
    'Selector',{@(v1) (v1 >= 4), 'CLASS'});
[lat, lon] = projinv(mstruct, [local.X], [local.Y]);
save('local', 'lat', 'lon');
disp('Saved class local.');
```

```

all = shaperead('boston_roads.shp');
[lat, lon] = projinv(mstruct, [all.X], [all.Y]);
save('all', 'lat', 'lon');
disp('Saved class all.');
```

---

```

end
% main.m
for s = ["highway", "local", "all"]
    load(s);
    figure;
    title(s)
    mapshow(lon, lat);
    %geoshow(lat, lon);
end
```

## 4. Workflow

### Vorverarbeitung:

- Erstellen/Sammeln des Kartenmaterials
- Vorverarbeitung und Kacheln der Karte in Speicherfreundliche Teile
- Erstellen eines/mehrerer Graphen auf Basis des Kartenmaterials (z.B. ein Graph für Autobahnnetz, weitere für lokale Straßennetze)

### Hauptprogramm:

- Lokalisierung des eigenen Fahrzeugs über GPS (map-matching)
- Lokalisierung eingegebener Adressen
- Auswahl der Start/Endknoten der Route auf Basis der gefundenen Koordinaten.
- Finden einer passenden Route (Dijkstra/A\*)
- graphisches Anzeigen der Route/Fahrzeugposition
- kontinuierliches Überprüfen, ob Fahrzeug noch auf Route ist
